

No. Ft. 26/2010(Mgt.)Grazing Blp.
H.P. Forest Department.

Dated Shimla-1, the

24 JAN 2025

From: Pr. CCF(HoFF)HP, Shimla.

To: All CCFs/CFs/DFOs (T&WL) in HP.

Subject: **Recognition of pastoralist migratory routes and halting places of Sheep and Goat herders in Himachal Pradesh.**

Memo:

Kindly refer to the proceedings of Grazing Advisory Committee Meeting held on 17.03.2022 under the Chairmanship of Hon'ble Forest Minister, HP. In this meeting, in **Agenda No. 47.5-Development of grazing land, 47.8-To digitize the migratory routes, 47.13 Digitization of grazing permits and 48.1-Integration of grazing permit system and availability of water** etc. issues were raised.

2. In this regard following directions are given to field officers to effectively manage grazing land, grazing routes and to increase the productivity of the grazing land:-

i) Based on the above observations, tree planting under any plantation scheme should be avoided in areas that serve as migratory routes or halting sites for pastoral communities in Himachal Pradesh. Tree plantation programs can be conducted in consultation with pastoral communities, ensuring their migratory routes and halting locations are understood and mapped. Efforts should be made to involve these communities in decision-making, particularly if there is a need to divert lands under migratory grazing for plantation or infrastructure purposes. In such cases, alternative routes or halting places should be explored. This approach will reduce the costs associated with ineffective plantation efforts by focusing on areas that are less vulnerable to grazing. By prioritising suitable sites for tree planting, it will enhance the chances of successful growth and long-term survival of the plantations. Moreover, by ensuring continued access to grazing grounds for pastoralists, this approach will contribute to sustaining the livelihoods of numerous migratory families in Himachal Pradesh.

ii) To support sustainable grazing practices and protect quality grazing lands, it's important to implement a system for tracking livestock movements, managing permits, and monitoring grassland health. This will help facilitate pastoral communities' access to high-quality grazing areas, secure their livelihoods, and protect planted areas from grazing, thereby supporting high tree survival rates.

In addition, please find attached all the latitude and longitude of the location where shepherds pass through and their halting location (**Annexure-I**). Please avoid all these areas for plantation as that will result in either loss of these plantation or loss of grazing recourses for graziers. The distribution of grazing location and migratory livestock population are also attached as maps for your perusal and further necessary action (**Annexure-II**).

Encl: As above.

(Sameer Rastogi) IFS
Pr. Chief Conservator of Forests (HoFF),
Himachal Pradesh.

ANNEXURE A

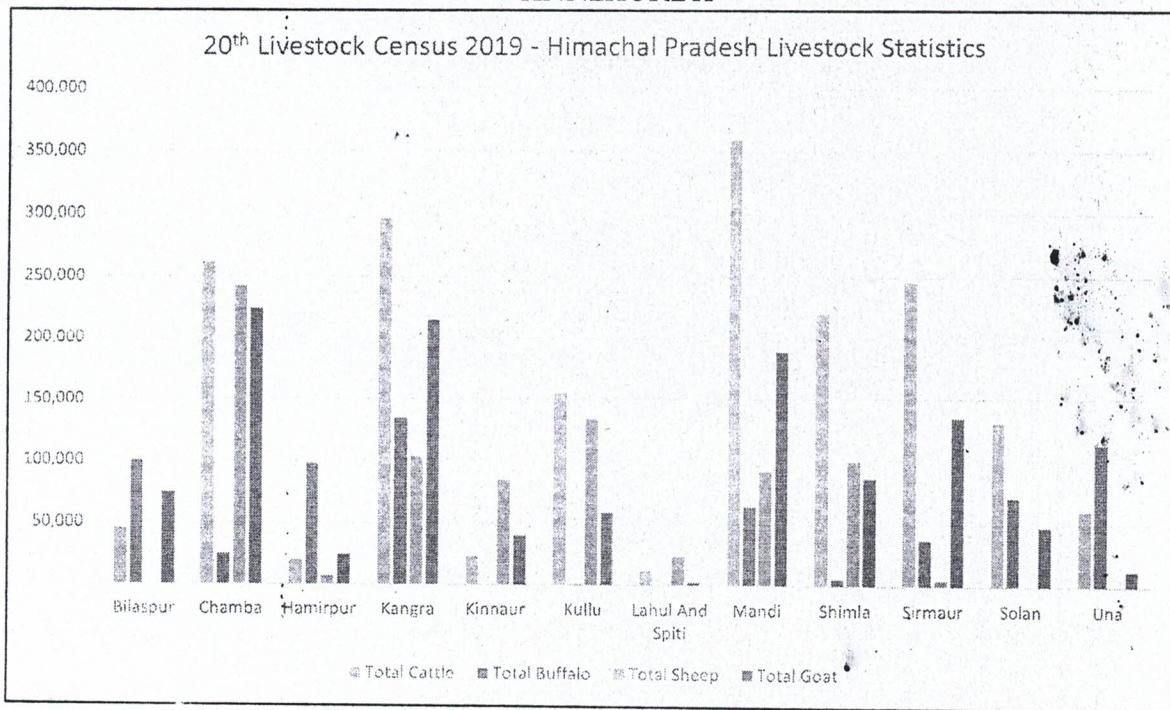

Figure 1: This bar graph shows the populations of cattle, buffalo, sheep and goat as reported in the 20th Livestock Census in 2019.

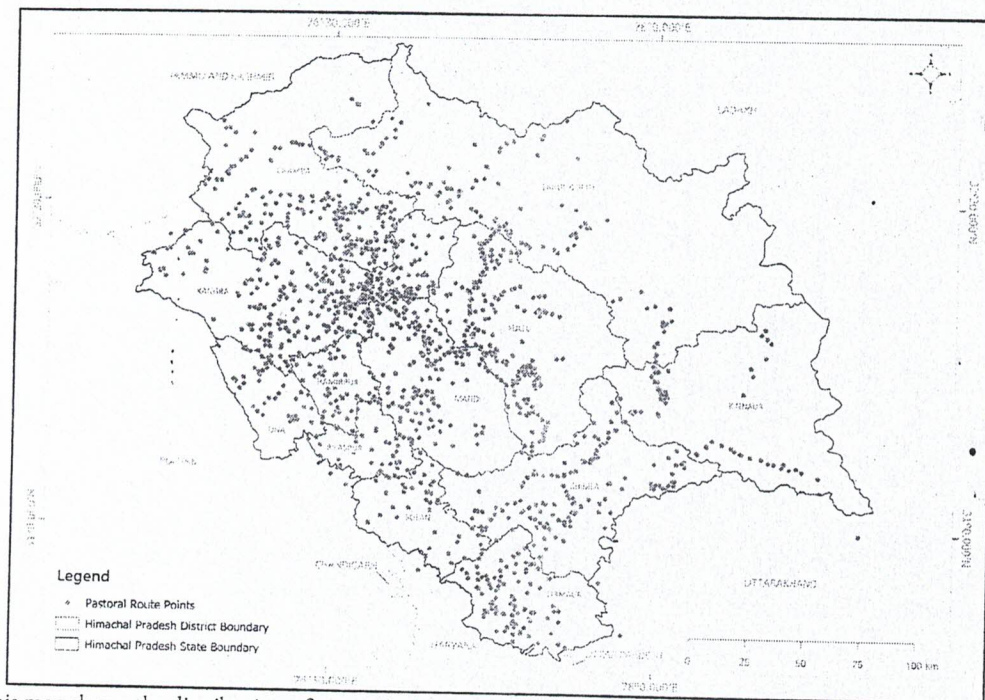

Figure 2: This map shows the distribution of pastoral grazing locations across the state of Himachal Pradesh. The purpose of this map is to indicate the vast scale and spread of pastoralism across the state, indicating its importance and spatial distribution.

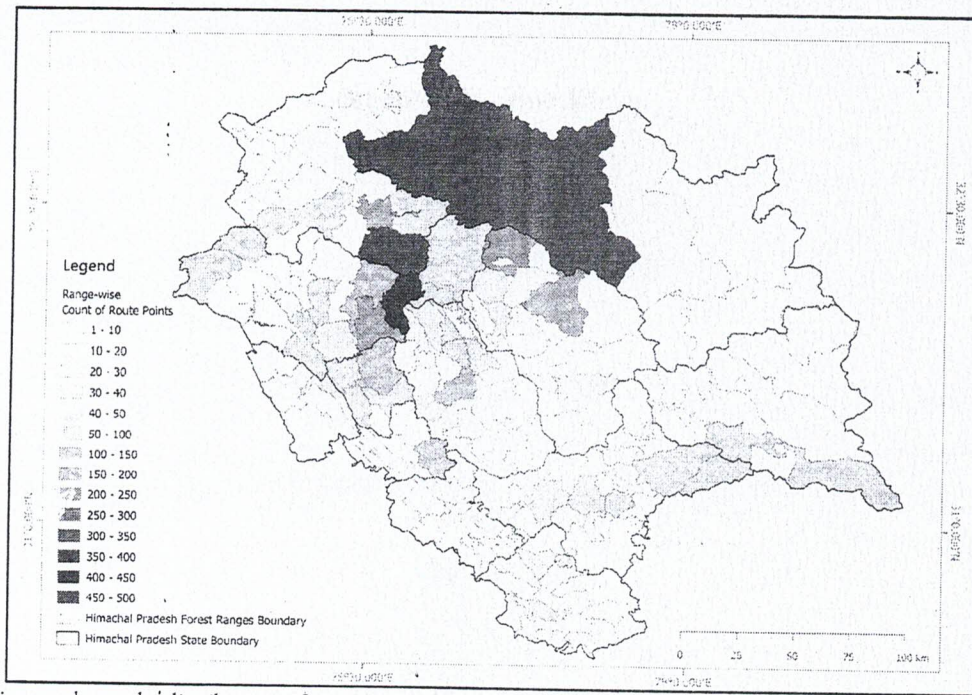

Figure 3: This map shows the distribution of pastoral grazing locations for each forest department range in the state of Himachal Pradesh. The map identifies key forest ranges that are of importance from a pastoral grazing point of view. The map also indicates where the majority of pastoral grazing locations are found at the sub-district level.

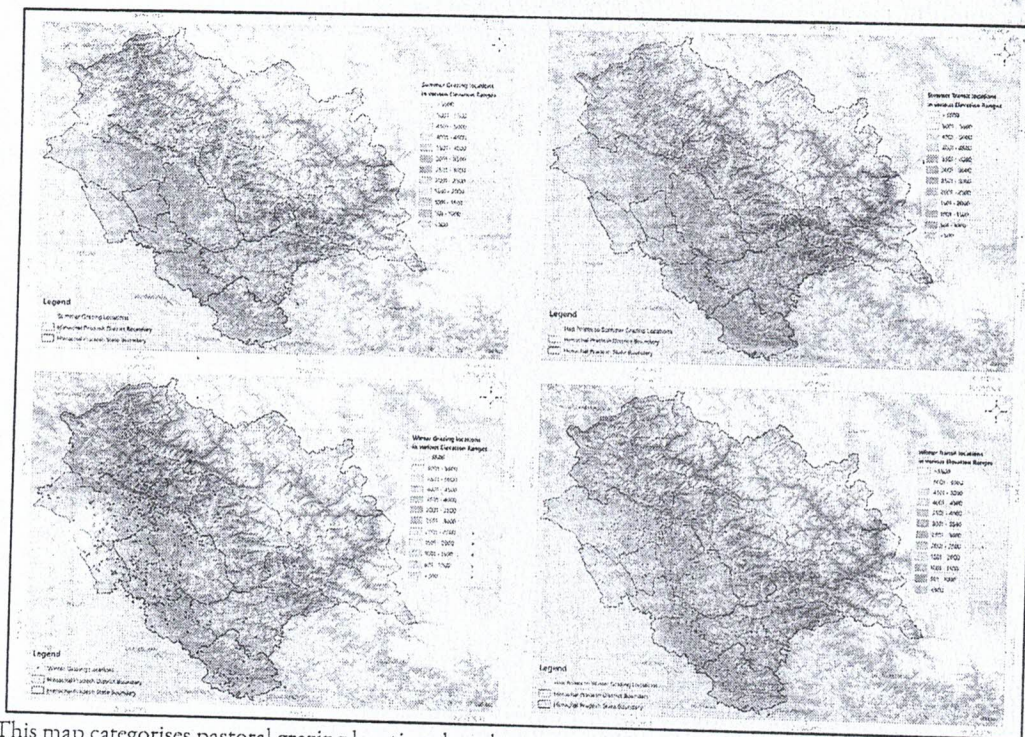

Figure 4: This map categorises pastoral grazing locations based on seasonal usage, distinguishing between summer and winter grazing areas. Pastoralists move across altitudinal gradients to access year-round fodder, adapting to seasonal variations in resource availability. The map highlights summer grazing areas (in orange) and winter grazing areas (in blue), illustrating the seasonal patterns of pastoral mobility and the spatial-temporal dynamics of their use of the Himachal landscape.

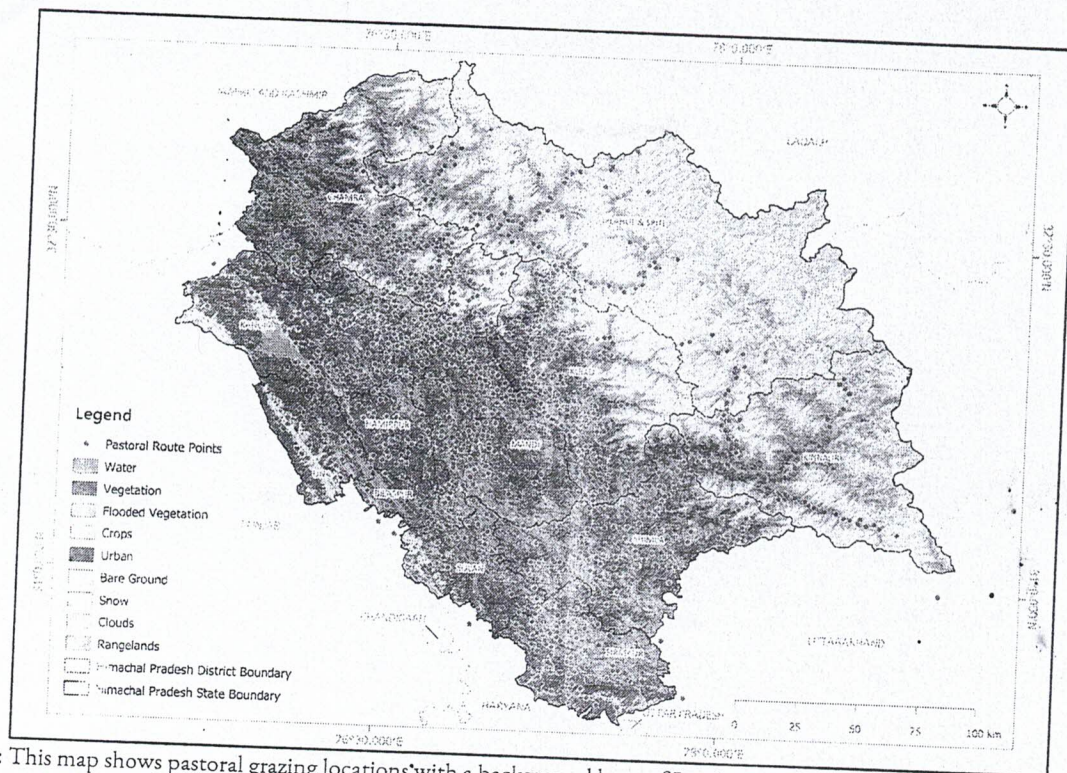

Figure 5: This map shows pastoral grazing locations with a background layer of Land Use Land Cover as per Sentinel 2 data. By integrating pastoral grazing locations and vegetation data we get a better understanding of the lands that are used by pastoralists while on migration. It also indicates the land available for pastoral grazing as well as their proximity to urban areas, forest lands and other natural resources.

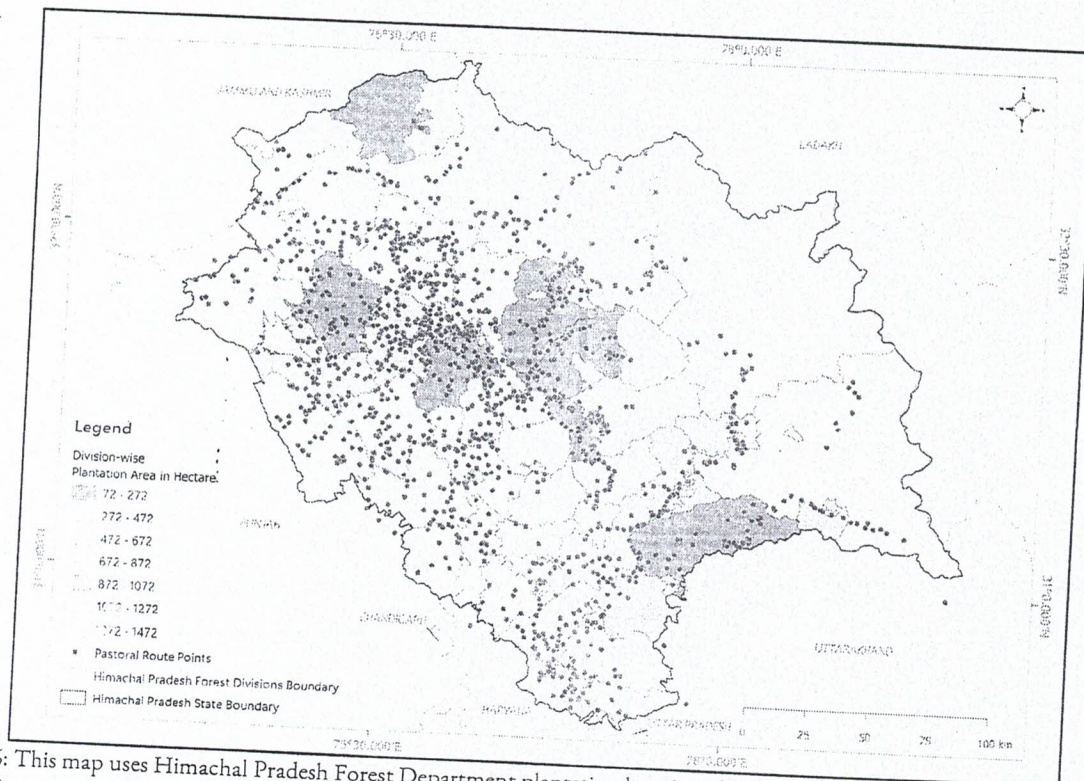

Figure 6: This map uses Himachal Pradesh Forest Department plantation locations (in the background), along with pastoral grazing locations to indicate the relationship between the two. While FD plantations may temporarily restrict access to pasture, pastoralists usually change their pasture requirements and mobility in response to closure of these lands. Observing from this map, it is important for the Forest Department to recognise pastoralists and legitimate users of forest lands in the state.

ANNEXURE B
